COMMERCIAL DISHMACHINE & CHEMICAL DISPENSING PARTS CATALOG

TCD PARTS INC. IS YOUR “ONE-STOP SHOP” FOR DISHMACHINE AND CHEMICAL DISPENSER REPLACEMENT PARTS

WHO WE ARE

- Family-owned and operated business outside Kansas City, Missouri.
- For more than 35 years, we’ve been dedicated to engineering, manufacturing, and distributing top-notch products and solutions for chemical companies.
- Largest US supplier of Dishmachine, Warewash, and Laundry Chemical Tubing.

OUR GOAL

- Quality Products: Rest assured that our products are top-notch, meeting all safety, reliability, and efficiency standards to boost your business and equipment performance.
- In-Stock Parts: We thrive on getting your equipment back to full speed.
- Get Your Parts Fast: Same-day shipping available. Our warehouse is centrally located in the Midwest to ensure fast fulfillment for all our customers.
- Cost Effective: Unbeatable pricing.

PRODUCT LINES

- Peristaltic Pump Squeeze Tubes & Chemical Supply Line Tubing.
- Dishmachine Replacement Parts
- Chemical Dispensers & Parts
- Plumbing Valves & Fittings – Brass, SS & Plastic
- Chemical Storage Racks – Bucket Dollies
- Chemical Testing & Safety Products
- Dish Tables & Pre-Rinse Units

TUBING

DISHMACHINE, WAREWASH & LAUNDRY

TCD Parts offers a wide variety of tubing to meet many specifications. We have an extensive selection including commercial dishmachine tubes, warewash dispenser squeeze tubes, laundry dispenser squeeze tubes and supply tubing.

SQUEEZE TUBE REFERENCE GUIDE

EPDM (HC)

This tube is manufactured from Ethylene Propylene Dieneterpolymer resins and salt-cured. EPDM exhibits high tensile strength and flexibility with a low coefficient of thermal expansion. It is resistant to UV radiation, weathering, and microbes. It can be used with most weak-to-strong alkaline solutions and weak-to-medium acids. Best used in Dema & Knight Dispensers.

ULTRA-PREMIUM EPDM (HCXR)

This tube is manufactured from Ethylene Propylene Dieneterpolymer resins and microwave cured. EPDM exhibits high tensile strength and flexibility with a low coefficient of thermal expansion. It is resistant to UV radiation, weathering, and microbes. It can be used with most weak-to-strong alkaline solutions and weak-to-medium acids. Best used in Hydro Dispensers.

SANTOPRENE® (SA)

Offers good mechanical properties under a wide range of operating temperatures. Highly durable, it is resistant to fatigue, ozone, ultraviolet, acids, alkalis, water, and most oils and lubricants. It has outstanding use with detergents and sanitizers. Color is natural (tan).

NORPRENE® (NP)

Formulated to withstand the high temperatures. Will not crack or deteriorate as commonly found when using traditional rubber tubing. Extremely flexible, Noroprene tubing resists kinks and retains its shape while installing quickly and easily. When harsh sanitizing solutions are used, it exhibits exceptional chemical resistance and is unaffected by a wide variety of cleaning solutions.

SILICONE (SIL)

A peroxide cured silicone process is used to extrude a highly useful silicone tube. Surface properties, both inner and outer, resist sticking and encrustation. Silicone will not support bacterial growth. The tubing is soft and pliable. Silicone can be used with most acid and alkaline solutions, but should not be used with solvents and oils. Highly recommended for "Rinse Aid" which tends to draw moisture from tubing making it brittle. Silicone does not contain moisture.

TYGOPRENE® (TGP)

Tygotrene pump tubing is translucent in color and has excellent chemical resistance to a wide range of fluids, including acids and bases. Tygotrene tubing can be considered an alternative to silicone when longer pump tubing life is required. Temperature resistant up to 250°F. Extremely flexible.

VITON (VT)

An ideal choice and top performer in a range of applications including automotive, chemical processing, aerospace, and industrial markets. The rubber is ideal for these applications because of its ability to resist high temperatures, destructive chemicals, and harsh environments.

NORPRENE® BI-WALL (TP)

High performance co-extruded product specifically formulated to provide an ideal combination of chemical resistance and pump life. Its inert, ultra-smooth, plasticizer-free bore resists the absorption/adsorption of aqueous fluids while the Noroprene outer jacket provides long life in peristaltic pumps. The inner liner significantly increases the chemical resistance and allows for a broader range of chemical applications without the use of multiple tubing.

EVA TUBING

This tubing is a blend of 15% ethyl vinyl acetate and polyethylene materials. The extrusion process produces a flexible smooth bore material that has good impact strength resistance at temperature ranges between -105°F and 160°F. EVA is resistant to oils and most acid/alkali chemical compounds. This tubing is recommended if you need high chemical resistance.

URETHANE TUBING

This tubing is made of a tough, ester based polyurethane with high clarity, tear strength and excellent abrasion resistance. It has exceptional resistance to oils, greases, fuels and many other chemicals. Able to withstand rugged daily use, resists weathering and can be safely used in temperatures to 200°F (93°C).

REINFORCED BRAIDED EVA TUBING

This tubing is a high-quality reinforced hose designed to transport a wide variety of chemicals and other liquids. Constructed of EVA inner and outer tubing with polyester textile yarn. Operating temperature range of -30°F to 125°F.

REINFORCED BRAIDED PVC TUBING

This tubing is an open mesh polyester braiding permanently encapsulated in walls of clear, flexible PVC tubing. Offers far higher pressure capabilities than unreinforced PVC tubing made from non-toxic ingredients conforming to USP Class VI and FDA standards. Mirror smooth interior allows outstanding flow characteristics with full visual flow provided by a crystal clear compound. It is corrosion and abrasion resistant with flexibility similar to rubber but with much longer life.

DURA PEX TUBING

This tubing is processed through an electron beam in order to enhance the mechanical properties over conventional polyethylene. Dura-Pex is pliable and can easily be straightened after removal from the coil. Dura-Pex is chlorine resistant and has greater dimensional stability than other tubing. Dura-Pex requires fewer fittings than a traditional rigid plumbing system like copper and is easier to install.

Operating Pressure Limits:

Water: 160 PSI @ 73°F, 100 PSI @ 180°F & 80 PSI @ 200°F

DRAIN TEMPERING VALVE

ADAPTABLE
TO ALMOST ANY
DRAIN SIZE

OVERVIEW

The DTV is a mechanical valve that tempers drain water to below 140°F. Eliminates the use of electrical solenoid valves or thermostats. The DTV works on drain overflow and when the wash tank needs to be changed.

OPERATION

The DTV can be used in applications where a high temperature discharge flow to a drain/sewer must be tempered with cold water. The DTV is installed into the drain line such that the hot effluent passes over the thermal actuator of the DTV and this thermal actuator controls the cold water inlet port. If the hot effluent is above the specified set point, the DTV opens to allow injection of cold water. As the hot effluent cools, the DTV automatically modulates to reduce the cold water inlet flow. At about 10°F below the full open temperature, the cold water inlet is fully closed to conserve water.

The DTV provides a convenient, economical, and easy to use method of tempering hot effluent exceeds the specified set point temperature, it also conserves water by automatically turning off cold water when not needed.

BENEFITS

- Compliant with drain temperature limitations of plumbing codes
- Prevents damage to PVC piping due to over temperature conditions
- Minimizes water waste
- Easy to install
- Adaptable to almost any drain size

USES

- Commercial Dishmachines
- Autoclave discharge
- Any excessively hot effluent flow to sewer/drain

DESIGN FEATURES

- Rugged, clog resistant valve design
- Install using standard pipe fittings and tools
- Operates in any orientation
- Modulates to conserve cooling water
- Effluent tempering capacity limited only by cold water flow rate through DTV

REFERENCE GUIDE

PLASTIC FITTINGS AVAILABLE IN FOUR TYPES OF MATERIALS

- N** White Nylon made from virgin grade formulated to resist physical stress and abrasion. Meets FDA requirements.
- B** Black Polyethylene made from a high molecular weight linear polyethylene. Formulated for chemical compatibility and high-impact resistance at lower temperatures. Polyethylene is NSF approved for potable water.
- P** Polypropylene made from the finest polypropylene resins. Used for its resistance to a wide range of chemicals. Working pressures decrease as temperatures increase.
- K** Kynar a polyvinylidene flouride, has outstanding chemical resistance for handling high corrosive fluids. FDA listed, NSF listed.

Note

WHICH SHARKBITE SIZE TO PURCHASE

When determining which Sharkbite size to purchase - The nominal pipe size is the PEX tubing size. **For example: If your PEX tubing has an ID of 3/8" you will need to purchase a 3/8" Sharkbite Fitting.**

MONITORING SYSTEM FOR DISH RACK TABLE

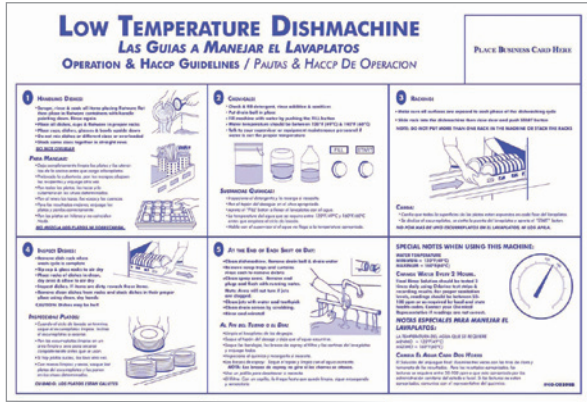

RACK GUARD™

Designed to be installed on conveyor type dish machines and serves to turn off the conveyor when dish racks have accumulated on the clean table.

- Easy installation
- Preserves dish racks and dish machine equipment
- System is energized using either 120V or 240V
- System uses converter module on pcb
- Built-in ambient light sensor that adjusts to light changes automatically
- Table light sensor embedded on clean dish table
- If failure occurs, monitor can be put in the off position which allows the dish machine to continue operation

TEST FOR CHLORINE SANITIZER

These colors indicate **APPROXIMATE** strength of the solution in parts per million (p.p.m.) available chlorine.
TIME OF TEST - 1 SECOND

0 10 50 100 200 PPM

Use Dry Fingers to Remove Test Strip from Container

- DISINCHARGE:** After sanitizing cycle, (130° - 160° F) hold test strip against the wet ware. *Immediately compare the test strip to the color chart (50 ppm is the correct level.)*
- GLASS WASHER:** After completion of sanitizing cycle, hold the test strip against the wet glass. *Immediately compare the test strip to the color chart (50 ppm is the correct level.)*
- SINK OR CONTAINER:** Dip test strip into solution to be tested. *Immediately compare the test strip to the color chart (50 ppm is the correct level.)*

CONTROLTESTING 866-206-1502
Item# 40-0501

TEST FOR QUATERNARY SANITIZER

These colors indicate **APPROXIMATE** strength of the solution in parts per million (p.p.m.) available quaternary.
TIME OF TEST - 10 SECONDS

0 100 200 300 400 PPM

Use Dry Fingers to Tear Test Paper

- Fill sink and add sanitizer.
- TESTING SOLUTION SHOULD BE 75" F WITH A PH OF 7.5 OR LOWER
- Tear off test strip, 1 1/2" long.
- Dip into water for 10 seconds. **DO NOT SHAKE (AVOID THE FOAM)**
- Immediately compare test strip to the color chart. **(IT SHOULD BE 200 PPM)**

CONTROLTESTING Item# 40-0505

TEST FOR IODINE SANITIZER

These colors indicate **APPROXIMATE** strength of the solution in parts per million (p.p.m.) available iodine.
Time of Test - 60 Seconds

0 12 25 50 PPM

Use Dry Fingers to Remove Test Strip from Vial

- Disincharge**
After sanitizing cycle, (130° - 160° F) hold test strip against the wet ware for 60 sec. *Immediately compare the test strip to the color chart (25 ppm is the correct level.)*
- Glass Washer**
After completion of sanitizing cycle, hold the test strip against the wet glass for 60 sec. *Immediately compare the test strip to the color chart (25 ppm is the correct level.)*
- Sink or Container**
Dip test strip into solution to be tested for 60 sec. *Immediately compare the test strip to the color chart (25 ppm is the correct level.)*

To be Used with Part # TP-102
CONTROLTESTING Part # 40-0502

HOW TO TEST WITH QUATERNARY QR TEST STRIPS

These colors indicate **APPROXIMATE** strength of the solution in parts per million (p.p.m.) available quaternary.
Time of Test 1-2 Seconds (QR-Quick Response)

100 200 400 PPM

Testing:

- Fill sink and add sanitizer mixed at the correct concentration. Water should be room temperature.
- Use dry fingers to remove test strip from container.
- Dip strip into water for 1-2 seconds.
- Avoid foam and do not shake.
- Compare test strip to the color chart within 10 seconds.
- Ideal reading 200 PPM.
